

IntrinsiQ Analytics' treatmentflow intelliVIEW™ graphically details patient progression through multiple lines of therapy, including analysis of treatment pathways, therapy duration, time to progression, and cumulative drug exposure. It enhances disease knowledge, sizes market potential of specific targeted populations, highlights areas of unmet drug treatment needs, and assists in revealing optimal drug usage in patient care.

BENEFITS

- Deepens insights into treatment and mortality rates of the drug-treated population
- Illustrates patterns of care among drug-treated patients (sequencing, time-to-treatment progression)
- Identifies drivers for treatment sequencing (patient age, performance status, early vs late progression)
- Reveals unmet needs
- Sizes market potential based on specific patient characteristics (eg, taxane refractory)
- Assesses clinical trial feasibility
- Customizes sequencing analyses utilizing the treatmentflow Analyzer

FEATURES

- Longitudinal treatment history (drug sequencing, time-to-treatment progression, termination of therapy, cumulative drug exposure)
- Annual assessments of treatment patterns for various tumor types, including breast, colorectal, non-small cell lung, ovarian, and prostate cancer, plus selected hematologic conditions
- Expandable to other diagnoses when sufficient patient samples exist
- Custom analyses focused on topics unique to the tumor
- Onsite education session led by disease expert(s)

UNIQUE ANALYTIC SOLUTIONS

At IntrinsiQ Analytics, we integrate, standardize, and transform raw data into information that can be analyzed, packaged, and customized for deeper business insights and intelligence. Along with our analytic products and services, we are known for superior and knowledgeable customer service. Our team is dedicated to responsiveness, high-quality data analysis, and a commitment to ensuring deliverables are received in a timely and efficient manner.
