# UroChart EHR's Touchscreen Technology

Made for the iPad.

Apple introduced the iPhone® and iPad®, Motorola the Droid, all featuring true state-of-the-art technology that changes the way we think about mobile and tablet devices. UroChart EHR's unique user interface, along with the most advanced mobile web browser available, provides devices robust enough for a "no compromise" with wireless mobile UroChart EHR solutions.

Consistent with the goal of creating fast and efficient software solutions for urologists, UroChart EHR will enhance your ability to focus on the patient, not the paperwork. With user-friendly controls, it is almost as if the EHR was built for the touch screen.

**Features:**

- Patient data anytime, anywhere
- On-the-fly charge capture for off-site services
- Hospital rounds lists, complete with bed assignments and one-touch links, to pertinent medical information
- Office and surgery schedules
- One-touch dialing of referring physician or primary physician from a patient's record
