

## MOBILE ELECTRONIC HEALTH RECORD (EHR) SOLUTION

# UroChartEHR® Mobile

Fast, efficient access to  
UroChartEHR

Improve provider efficiency and enhance patient care with a urology-specific solution built for mobile devices. UroChartEHR® Mobile delivers real-time access to critical patient data from your smartphone or tablet which enables your providers to engage in clinical activities while away from the office and untethered from a computer. With UroChartEHR Mobile, you will have easy access to clinical applications and resources that lead to more efficient and innovative care for your patients.

### Key Functionality

- **Seamless user interface**, along with the most advanced mobile web browser, provides instant access to key components of UroChartEHR
- Enhances **patient care coordination** with doctors and staff having easy access to medical records from an easy-to-use mobile interface
- **Instant access to patient records**, while increasing communication between healthcare facilities in a more efficient, secure manner
- Increases **staff efficacy and accuracy** while accessing patient files any where at any time

### Features

- 24/7 access to patient data including office notes, labs, surgical reports, and patient demographics
- On-the-fly charge capture for off-site services
- Hospital rounds lists complete with bed assignments and one-touch links to pertinent medical information
- Office and surgical schedules
- One-touch dialing of referring physician or primary physician from a patient's record
